

**Amendments to the Specification:**

Please replace the paragraph on page 8, lines 17-23 with the following amended paragraph:

Figure 2 shows the finished result in which drain region 20 extends from the substrate, source region 18 is provided adjacent to the trench 10 at the first major surface and body region 22 extends between the source region 18 and the drain region 20. Note that the ~~boundary-24-boundary~~ between body region 22 and drain region 20 is deeper away from the trench owing to additionally doped region 26 beneath the trench doped by the arsenic implant carried out into the trench.
